

## MÜHLE Shaving Brush

### Perfectly shaved?

Moisten the shaving zone – the face and neck – with warm to hot water. Make a lather from shaving soap or cream with the brush, apply in gentle strokes, then allow to take effect for one or two minutes. Without applying too much pressure, shave off the beard using a sharp blade. At which point you begin and whether you shave „against the grain“ can vary individually – and is ultimately a matter of experience. Rinse the skin with fresh water; after-shave, nurturing cream or balsam serve as an added treat.

**Your shaving brush will give you many years of shaving pleasure.  
The following instructions will help you to enjoy it even more:**

Prior to their first use, new brushes should be washed well using warm soapy water.

Do not leave the lathered brush standing. Immediately after use, rinse it thoroughly under running water. Otherwise, soap residue which can destroy the fine badger hair remains on the brush head, particularly in the middle. Dry the brush by repeatedly shaking out the remaining water, then hang it up with the bristles pointing down, ideally in a suitable holder.

When moist, the brush must not be kept in closed containers such as toilet bags. Do not use chemical detergents to clean the brush. Wooden or horn handles must not be left in water and should be dried with a cloth after use.

Please note that due to the normal friction during use of the shaving brush, surplus hairs can break. This is not a reason for rejection.
